

DATA SHEET

MapInfo® Professional v10.5

SAVE TIME, MONEY, AND RESOURCES WITH THE PREMIER LOCATION INTELLIGENCE SOLUTION.

Summary

MapInfo Professional v10.5 is an industry leading location intelligence desktop solution used for creating, editing, visualizing and analyzing customer and business data in the context of location.

Benefits

- Produce high-quality zoom-specific maps, quickly and easily.
- Save time while browsing, selecting, updating and exporting table content.
- Publish intelligent maps to Layered or Geo registered PDF and Pitney Bowes® MapInfo® Stratus™.
- Add great detail to your maps with Microsoft's Bing premium aerial maps.
- Search for data through industry-standard data servers globally.

OVERVIEW

MapInfo Professional v10.5 is a desktop application that helps organizations turn location data into actionable location intelligence. This version provides an assortment of dynamic new features, including a powerful user interface, new data sharing options, and powerful new data searching capabilities.

Fast and Easy Creation of Interactive Maps

MapInfo Professional v10.5's easy styling options allow for rapid creation of dynamic maps while maximizing the use of computer screen "real-estate" at every zoom-level. The new multiple style override capability allows map creators to quickly define zoom-level specific styles, labels and label expressions. Both existing and new users will quickly and easily generate great looking interactive maps in record time and will be more productive than ever before.

The New Table List Window delivers even greater time savings!

The Table List Window, shown as either a floating or docked window, remains visible during the entire mapping session, providing quick and easy access to all open tables, whether they are "mappable" or not.

MapInfo Professional users can:

- search the list of tables by name/type,
- add one or more tables to maps,

- update values or table structure and export content,
- and much more!

You can do all this from the Table List Window with a minimal number of clicks. By allowing you to search, edit, manipulate, and interact with all open tables easily, MapInfo Professional v10.5 delivers even greater time savings than ever before.

Publish Intelligent Maps with a Click of a Button

Sharing insightful maps was never this easy. Choose between a suite of PDF publishing options including standard PDF, Layered PDF and now Geo registered PDE. This means, MapInfo Professional v10.5 users can share more than just maps with their colleagues, they can share location-based answers.

MapInfo Professional v10.5 also supports the ability to publish maps to MapInfo Stratus. MapInfo Stratus, PBBI's first software-as-a-service web application, is designed for MapInfo Professional users within organizations who need to share corporate data via a map. Whether it's publishing data internally across the organization or externally to communicate with customers, MapInfo Stratus provides live information about the location of your customers, citizens, assets and services.

MapInfo® Professional v10.5

View Data around the Globe with Nothing to Install and Maintain

MapInfo Professional v10.5 includes the capability of accessing map data through popular Tile Server technology. This release introduces the ability to instantly add Microsoft's Bing™ global aerial data to any map.

Benefits of map data delivery through Tile Server include:

- Provides fast data delivery.
- Eliminates client-side data maintenance.
- Makes sharing a breeze! Easily share content such as Aerial Imagery with additional MapInfo Professional users.

MapInfo Professional v10.5 supports a number of Tile Server technologies including MapInfo MapXtreme, MapInfo Developer, MapInfo Stratus, as well as publicly available tile servers following industry-accepted standards.

Search and Discover Data

New capabilities help users and organizations search for data within an organization or around the world. Metadata (think of this as "data about data") is easily collected and shared with industry-standard data catalogs available from PBBI or other vendors. This includes the Open Geospatial Consortium's (OGC) Catalog Services WEB (CSW) standard which is required for meeting INSPIRE data sharing requirements. One or more catalogs can be searched at a time to find data that you need. These data catalogs might reference an organization's own internal data or they could be catalogs of data offered by other organizations that are on the Internet. Users will also be able to do some light editing on a single table. Another powerful capability is the ability to instantly view the actual data in MapInfo Professional. Viewing the data in MapInfo Professional is available when data is

Share your maps as Geo registered PDF—Associate geographic location and tabular data to geography right in the PDF. Sharing maps as Geo registered PDF means sharing map insight.

MapInfo Professional v10.5's Metadata Browser is easy to use. It provides an integrated Geodata search interface to quickly find and add data to your maps.

exposed as a File, such as MapInfo files, or as a Web service such as Web Mapping Service (WMS), Web Feature Service (WFS), or Tile Server links.

Can You Afford Not to Be Location Intelligent?

Data is used every day, and across every enterprise, to make critical strategic decisions that positively impact both business and customers. MapInfo Professional v10.5, and its location intelligence capabilities, helps organizations understand their business, analyze trends geographically, and make critical decisions with greater clarity of risk and opportunity. Can you afford not to implement MapInfo Professional v10.5 today?
